# Reece Norman Barker

Applied Computer Science student at Saxion University of Applied Sciences

me@reece.page +49 162 5865374 reece.page linkedin.com/in/reecenbarker github.com/reece-barker

Munich, Germany and Enschede, Netherlands

## Profile

Raised in Munich, studying Applied Computer Science in Enschede. I write software, build hardware and co-founded a startup whose AI runs the climate of a room. On contract at Munich International School I support IT and build on Microsoft's Power Platform. I want to work on technology that makes people's lives better and wastes less.

## Experience

### IT support and Power Platform developer, on contract

2024 to 2026

Munich International School

Supporting IT and building apps and automations on Microsoft's Power Platform, including the purchase order system the finance team uses.

### IT department, summer work

Three summers, the last in 2024

Munich International School

Summer work in the IT department, the last summer covering IT and finance.

### Freelance developer

From age sixteen, almost three years

Self employed

Full stack web platforms with secure logins and live monitoring, a support and ticketing system sold on two marketplaces, and a configurator for Bronkhorst.

## Education

### Industrial Automation minor

2026 to February 2027

Saxion

Robotics, PLCs, SCADA and vision systems, around a production line with eight ABB robots.

### Applied Computer Science

Since 2024

Saxion University of Applied Sciences, Enschede

First year completed with the propaedeutic diploma, cum laude. Embedded C and C++, real time operating systems, signal processing and machine learning. Selected for the Saxion Honours Programme. Highest distinction at Saxion's International Project Week.

### IB Diploma

Until 2024

Munich International School

Computer Science, German and Geography at higher level. Extended essay on whether London's Ultra Low Emission Zone cut CO2.

## Selected projects

### AI climate control for rooms

Ongoing

A startup I co-founded with three classmates. Our software connects to the heating, cooling, air and lighting a building already has and runs them together, adjusted to who is actually in the room.

### A production line for a LEGO bulldozer

2026 to February 2027

In Saxion's Industrial Automation minor, a team of thirteen is designing a production line that assembles a LEGO Technic bulldozer every five minutes, with eight ABB robots, vision systems and PLCs.

## Software

JavaScript and the web

Node.js, Express and MySQL

Browser extensions

Microsoft Power Platform

## Hardware and automation

ABB robots and RobotStudio

PLCs, SCADA and vision systems

Raspberry Pi

Embedded C and C++

## Data

Signal processing and change detection

Machine learning

MATLAB

## Languages

**English** First language

**German** B2

## Also

Saxion Honours Programme, second year

Sustainability ambassador
